Product Information ExcelTaq™ series

2X Fast Q-PCR Master Mix (SYBR, no ROX)

TQ1200	**200 RXN**	
	2X Fast Q-PCR Master Mix (SYBR, no ROX)	1 ml x 2
TQ1201	**500 RXN**	
	2X Fast Q-PCR Master Mix (SYBR, no ROX)	1 ml x 5

Storage

Aliquot to avoid multiple freeze-thaw cycles
Protect from light
-20°C for 12 months

Features

- High sensitivity and signal intensity
- Compatible with fast PCR program
- With smart blue contrast dye as a visual aid for reaction setup
- Low background
- High stability

Description

The ExcelTaq™ 2X Fast Q-PCR Master Mix (SYBR, no ROX) is a ready-to-use reagent with all the essential components for quantitative real-time PCR (qPCR) except primers and templates. The master mix features high sensitivity and signal intensity (Fig. 1) as well as low background and better compatibility with fast PCR program (Fig. 2).

The ExcelTaq™ 2X Fast Q-PCR Master Mix (SYBR, no ROX) contains a highly stable hot-start *Taq* DNA polymerase in an optimized buffer with dsDNA specific SYBR green fluorescent dye. Consequently, this master mix features high stability during storage, even at 37°C for weeks.

With inert smart blue contrast dye, the ExcelTaq™ 2X Fast Q-PCR Master Mix (SYBR, no ROX) is ready-to-use and greatly reduces pipetting errors, while largely improving the reproducibility of the process. The ExcelTaq™ 2X Fast Q-PCR Master Mix (SYBR, no ROX) is also compatible with ROX reference dye if ROX is recommended by the manufacturer of the qPCR system. This master mix allows sensitive, precise amplification, real-time tracking of the amplification process, and simultaneous quantification for targeted DNA molecules.

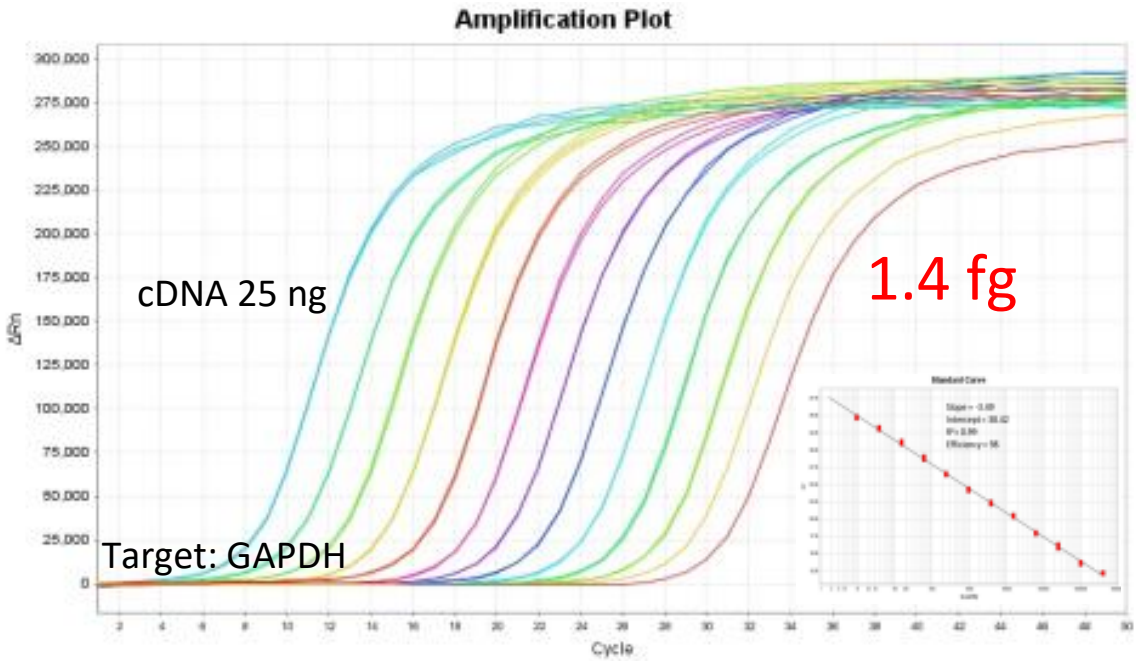

Fig. 1. The amplification plot and standard curve of real-time PCR with cDNA template ranged from 25 ng to 1.4 fg in quantity, analyzed by using TQ1200 ExcelTaq™ 2X Fast Q-PCR Master Mix (SYBR, no ROX) for qPCR amplification.

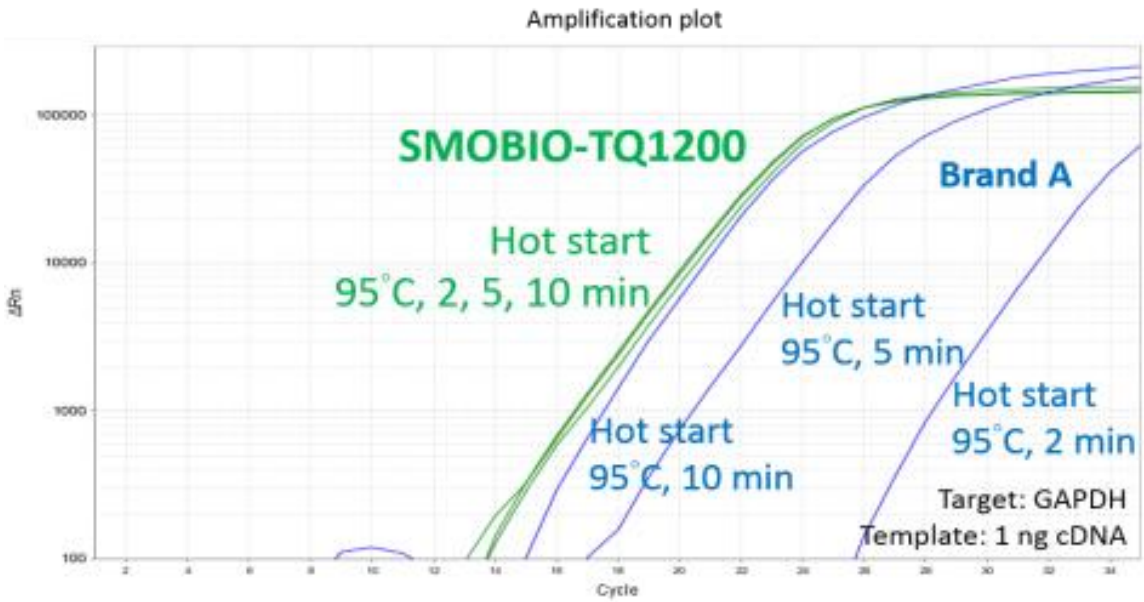

Fig. 2. The overlapped amplification curves from different hot start duration display that TQ1200 ExcelTaq™ 2X Fast Q-PCR Master Mix (SYBR, no ROX) preforms successfully in short duration of initial activation (2 min) .

Application

- Quantitative real-time PCR
- Quantitative two-step real-time PCR

Instrument compatibility

- BioRad system:
  - CFX96
  - Chromo 4™ Real-Time Detector
  - DNA Engine Opticon™
  - DNA Engine Opticon™ 2
  - CFX384 Touch
- Cepheid system:
  - Smart Cycler®
- Eppendorf system:
  - Mastercycler® ep realplex
- Roche system:
  - Roche LightCycler® 480
  - Roche LightCycler® Nano
- QIAGEN system:
  - Rotor-Gene™ Q
- Illumina system:
  - Eco™

Note: ExcelTaq™ 2X Fast Q-PCR Master Mix (SYBR, no ROX) is compatible with a variety of real-time instruments, including but not limited to the list above.

Recommended primer design

- Amplicon size: 80-150 bp
- Tm value: around 60°C (calculated with Primer3 software)
- Primer length: 17-25 mer
- Sequence:
  - 45-55% of GC content is recommended.
  - Avoid regional high GC or AT content
  - Avoid palindrome sequence
  - Sequence with G or C at the 3' end is recommended.
- Specificity of primers should be confirmed through a BLAST search.

Recommended reaction mixture set up for qPCR

Template	2 µl*
Forward primer	50 – 400 nM**
Reverse primer	50 – 400 nM**
2X Fast Q-PCR Master Mix (SYBR, no ROX)	10 µl
H_2O	to 20 µl
Total volume	20 µl

*Final template concentration varies depending on the copy number of target present in the template solution. The recommended amount of template is: **100 fg -100 ng of cDNA, 80 pg -50 ng of gDNA or 10^2-10^8 molecules of plasmid.**

**The PCR primer concentration for an optimal qPCR reaction may vary according to primers' properties and template condition.

Recommended qPCR program

Try Fast program first, and optimize the reaction conditions if necessary. If the Fast program still does not give optimal results, try the standard program.

Fast program for qPCR

Steps	Temp.	Time	Cycles
Template denature and enzyme activation	95°C	20 sec	1
Denature	95°C	3 sec	40
Annealing /Extension	60°C	30 sec	
Melting curve analysis	Refer to instrument manual		

Standard program for qPCR

Steps	Temp.	Time	Cycles
Template denature and enzyme activation	95°C	2 min	1
Denature	95°C	15 sec	40
Annealing/Extension	60°C	60 sec	
Melting curve analysis	Refer to instrument manual
